

## **National Power CEO Chris Hutter Shares Industry Insights at Power-Gen Conference in New Orleans**

New Orleans, January 25, 2024 – National Power, a leader in power and infrastructure solutions, is proud to announce that CEO Chris Hutter delivered a compelling presentation at the Power-Gen conference held in New Orleans from January 22-25, 2024. As an industry expert, Mr. Hutter provided invaluable insights into the critical importance of maintaining uninterrupted power for mission-critical customers across various sectors.

During his address, Mr. Hutter underscored the necessity for resilient power solutions in industries that supply broadband, wireless, industrial, water, military, EV charging, healthcare, and data centers. Highlighting the severe implications of power outages, he elaborated on the rising costs and significant consequences associated with increased downtime. His discussion encompassed several key points:

- **Increasing Downtime Costs and Consequences:** The financial and operational impacts of power outages are escalating, affecting productivity and service reliability.
- **Need to Increase Redundancy / Decrease Points of Failure:** Enhancing system redundancy and minimizing failure points are essential to ensure continuous operation.
- **Aging Infrastructure:** The need to address and upgrade aging power infrastructure to meet current and future demands.
- **Electrification and Digitization of Everything:** As the world becomes more electrified and digitized, the demand for reliable power sources intensifies.
- **Storm Threat Intensity and Frequency:** With increasing storm threats, the importance of robust power systems becomes even more critical.
- **Population and Work Habits Shifting:** Changing demographics and work habits require adaptable and reliable power solutions.
- **Growth in Electric Vehicles and Charging Needs:** The surge in electric vehicle adoption necessitates the expansion of charging infrastructure.
- **Proliferation of Distributed Energy Resources (DERs) and ESG Requirements:** The rise of DERs and environmental, social, and governance (ESG) mandates calls for innovative and sustainable power solutions.

Mr. Hutter proposed a comprehensive range of solutions to enhance infrastructure resilience, including improvements in standby power, HVAC systems, energy storage, power systems, solar solutions, EV charging infrastructure, and storm response initiatives.

In his role as CEO, Chris Hutter has been at the forefront of advocating for power resilience and reliability. His expertise in discussing these critical issues underscores his position as a leading voice in the power and infrastructure sector.

National Power remains committed to providing innovative solutions that enhance power reliability and infrastructure resilience across the country, ensuring that mission-critical customers can operate without interruption.

About National Power:

National Power is a premier provider of power and infrastructure solutions, dedicated to ensuring the highest standards of reliability and efficiency for mission-critical operations. With a focus on innovation and sustainability, National Power supports a wide range of industries, including broadband, wireless, industrial, water, military, EV charging, healthcare, and data centers.
